DB-AIRE II

Precision Environmental Control Systems For Technological Room Applications

DB-AIRE II AIR-COOLED DX & CHILLED WATER SYSTEMS

Today's technology rooms require precise, stable environments and design in order for sensitive electronics to operate optimally. Precision air conditioning is designed for close temperature and humidity control. It provides high reliability operation with the ease of service, system flexibility and redundancy necessary to keep the electronic equipments up and running 24 hours a day, 365 days a year.

DB-AIRE II another milestone series offers a wide range of capacities in superior compact, stylish black themed attractive furniture grade cabinets in Upflow/ Downflow configuration to provide room-based cooling, control of perfect humidification and air filtration.

GENERAL INFORMATION

DB-Aire II units are precision environmental control systems that bring a new standard of compact, flexibility and reliable performance to the computer room. Because room requirements differ, DB-Aire II offers a wide range of sizes and styles.

DB-Aire II units (R410A) are ETL listed for North America and Canada regions and certified to AHRI Standard 1360. Optional ETL listed for other regions are available.

DB-AIRE II SYSTEMS

DBAIRE II comes in 2 systems under Air cooled DX and Chilled water system. The nominal capacity range is 2 to 26TR (7 to 91kW) of cooling.

COMPUTER COMFORT

Computer rooms require air which is clean and properly distributed with precisely controlled temperatures and humidity. Building HVAC systems simply are not designed to meet these demands. But, DB-Aire II units easily accomplish these goals with top-rated efficiency, 24 hours per day 7 days a week! DB-Aire II units have been designed to meet the demanding requirements of the most advanced computer room.

Although building HVAC systems cool your staff, they fall short of your computer's comfort need. And they are unable to provide the close humidity control required in a modern data processing centre.

DESIGN FEATURES

- Compact cabinet with anodized aluminum frame, stylish black powder coated panels of 25mm thickness with closed cell Polyethylene (PE) foam insulation.
- High efficiency single (DBA 02-13) and dual (DBA 14-26) scroll compressors with rotolock connection for ease of service (for Air Cooled DX Systems).

- High-low pressure cutout to protect compressor (for Air Cooled DX Systems).
- Specially built with non screw fixed panels where no special tools required, front access for easier service and maintenance
- TEFC motor with low speed belt driven DIDW centrifugal fan.
- Large faced area evaporator coil with hydrophilic fins.
- Deep pleated disposable filter of MERV 7 (Ashrae 52.2). Stainless steel finned tabular type electric heater.
- 3-way modulating valve provides accurate temperature control and dehumidification (for Chilled Water Systems).
- Integrated control system within the unit with panel mounting 4.3" graphical color touch screen for temperature/ humidity/alarm control and monitoring.
- Vision 2020i connectivity to BMS for telemonitoring.
- Electronic Expansion Valve (EEV) for efficient capacity modulation and improve performance (optional).
- Hot gas reheat for Air Cooled DX systems (optional).
- Supply air plenum box for upflow model (optional).
- Steam generator humidifier (optional).
- Floor water detection alarm (optional).
- VFD applied to regulate airflow thus reducing fan input power for energy saving (optional).

HIGH PERFORMANCE LOW COST

DB-Aire II's high-tech, furniture look is clue to its high performance but belies its more than competitive price. Every DB-Aire II unit comes with a commitment to excellence as standard equipment.

DB-AIRE II MONITORING/ CONTROL

DB5+ VISION 2020i CONTROLLER

The Vision2020i is a microprocessor-based, programmable electronic controller come with DBGX terminal and optional remote management devices. These devices represent a powerful control system that can be easily interfaced with most Building Management Systems (BMS) available on the market. The Vision2020i controller has been developed by Dunham-Bush to provide solutions to precision air-conditioning in general. In a DBLAN network (Vision2020i Local Area Network) the Vision2020i can performed as master and slave by connecting to other Vision2020i controllers. Up to 16 devices (DB5+ controllers and DBGX terminals) can be connected together, allowing highly efficient sharing of information. Each device in the DBLAN network can exchange digital or analogue data with all the others.

DBGX 4.3" COLOR TOUCH SCREEN TERMINAL

The DBGX 4.3" graphic terminal is part of the family of touch screen terminals designed to simplify user interface with the Vision 2020i family for Dunham-Bush's application. The electronic technology used and the new 65K color display means high quality images and advanced functions are available for a superior appearance. The touch screen panel makes interaction between the user and the unit much easier by simplifying navigation between the various screens.

OPERATION

DBGX touch screen panel makes interaction between the user and the unit much easier by simplifying navigation between the various screens. Touch screen on the DBGX panel allows unit on/off operation, menu selection, operational information, diagnostics, historical data and trend graph. Multi-level authorization password feature prevents unauthorized access. Another feature is that all menu programmed information for basic system operation and alarm

parameters is stored in a non-volatile EEPROM and FLASH-MEMORY where backup battery is not required.

PROGRAMMABLE FUNCTIONS/ MONITORING

The user friendly touch screen color display permits step-by-step programming and display of the following functions:

- Temperature Set Point 10 to 50°C (50°F- 122°F)
- Temperature Sensitivity 0.5 to 2.7°C (1°F- 5 °F)
- Humidity Set Point (40% - 60% RH)
- Humidity Sensitivity (1% - 10% RH)
- Temperature Alarm Set points
- Humidity Alarm Set points
- Unit Start Time Delay

Normal functions are monitored and displayed on the display panel and include, in addition to the above set points, the following:

- Current Temperature (deg C or deg F)
- Current Humidity (%RH)
- Cooling Stages 1, 2 as applicable
- Heating Stages 1, 2, 3
- Humidification
- Dehumidification

ALARMS

Alarm conditions are also monitored on the display panel and are enunciated by an audible alarm. The alarm silence button will quiet the audible alarm but the display will continue to indicate the alarm condition until the problem is corrected.

The following alarms are standard:

- Compressor High/Low Pressure
- High and Low Temperature
- High And Low Humidity
- No Airflow
- Filters Blocked
- Humidifier Failure
- Power Failure Restart
- Compressor Short Cycle
- Temperature Sensor Error
- Humidity Sensor Error
- Local Alarm Customer Input Alarm
- Maintenance Due

With add-on optional sensors, the following alarm status can be monitored:

- Under the floor water detection
- No water flows
- Smoke alarm and etc.

In addition, incomparable control settings will be identified on the display panel.

DB-AIRE II MONITORING/ CONTROL

HISTORICAL DATA

In order to facilitate maintenance and service, component run times for fan motor, compressor operation, reheat stages, humidification and dehumidification can be recalled and displayed on the DBG5 display panel. The current temperature and humidity, with the minimum and maximum readings for the last 24 hours of operation, can be recalled and displayed. The last ten alarms and hours since occurrence can also be recalled and displayed. The historical data base is stored in FLASH-MEMORY which does not require backup battery in the event of power failure.

DIAGNOSTICS

Automatic and manual diagnostic sequences simplify troubleshooting.

PROGRAMMING KEY

The programming keys for the Vision 2020i controllers provide easy software updates during both end-of production testing and maintenance procedures.

VISION 2020i BMS COMMUNICATION INTERFACES (Optional)

As technology become smarter and more intelligent. The Vision2020i offer BMS interfacing to provide important data and control from control room. Therefore, end user can easily control their needs. The Vision2020i comes with Modbus RTU protocol (RS485 communication) as a standard on J25 BMS2 port. The Modbus protocol is the most widely-used protocol in BMS system. Its character being very simple to implement in all development packages and featuring limited use of the system's hardware & software resources. Below are the available communication interface features of the DB5+ controller:

1) Ethernet/BACnet TCPIP Card

The Ethernet/BACnet TCPIP Card offer protocol option of:

- 1.1 Modbus TCP/IP. The Modbus protocol is the most widely-used protocol in BMS system. Its character being very simple to implement in all development packages and featuring limited use of the system's hardware & software resources.
- 1.2 BACnet IP. The protocol used of IP communication. The protocol based on the standards defined by US association ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers). Implementation of the standards is verified at BTL laboratories (BACnet Testing Laboratories) operated by the BACnet association.
- 1.3 SNMP (Simple Network Management Protocol). The protocol for IP networks defined by the Internet Architecture Board (IAB), in order to define commands used to exchange information between different devices over the network.

2) BACnet MS/TP Card

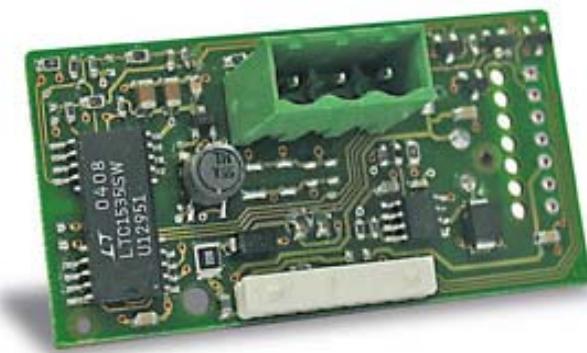

The BACnet MS/TP Card is the BACnet protocol used of RS485 communication. The protocol based on the standards defined by US association ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers). Implementation of the standards is verified at BTL laboratories (BACnet Testing Laboratories) operated by the BACnet association.

DB-AIRE II MONITORING/ CONTROL

3) LONWORKS Card

4) Modbus RTU Card

The LONWORKS Card is the protocol that was Created by Echelon Corp. The LONWORKS is a leading networking solution for building automation. The communication is based on the FTT10 electrical standard.

The Modbus RTU (RS485 communication) Card is a second Modbus RTU protocol available to select.

DB-AIRE II DESIGN FEATURES

FRAME AND CABINET

The cabinet comprises an anodized aluminium frame of epoxy powder coated black color paint with nylon corners and removable steel sheet panels. All panels shall be externally installed onto the cabinet by using special stopper system without using screws. The stopper system shall also facilitate the removable of panels for additional ease of field installation, service and maintenance on the system. All panels and access doors shall be fabricated from sturdy heavy gauge of 1.0mm steel sheets with epoxy powder coated oven baked black color paint to provide a durable finish. All panels shall be of 25mm (1 inch) thick single skin and lined with minimum 80kg/m³ density thermal and acoustical closed cell Polyethylene (PE) foam insulation with fire resistant of Class O (BS 476 Part 6, 7). The system shall be designed for front access only with hinged and lock type full height doors.

COOLING COIL

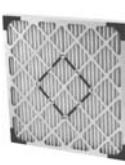

Computer selected coil design, using interwoven coil surface increases unit efficiency at low loads. Air is drawn through the coil at low velocity providing effective surface exposure with minimum turbulence. This provides greater efficiency in the cooling and dehumidification process.

FAN SECTION

Blowers shall be belt driven double-inlet-double-width (DIDW), statically and dynamically balanced with multiple forward curved blades mounted on a solid steel keyed shaft. Heavy-duty V-belt fan drive (sized for 200% safety factor) with cast iron pulleys keyed and secured to the blower shaft shall be provided.

FILTERS

The system shall be provided with 2 inches (50mm) deep (for model 02-05) or 4 inches (100mm) deep (for model 07-26) extended surface pleated disposable type filters rated for MERV 7 efficiency to ASHRAE 52.2 standard. Filters shall be withdrawable from the front of the unit.

ELECTRICAL REHEAT

The three stage stainless steel finned tubular reheat coils provide ample capacity to maintain room dry bulb conditions during a system call for dehumidification. Three equal stages give a more accurate controlled response to the requirements of the computer room. The heating elements are protected by thermal safety switches. The three stages of reheat create a noticeable lowering of energy use.

HOT GAS REHEAT (OPTIONAL)

The unit shall incorporate a hot gas reheat coil located downstream of the evaporator coil with modulating valve which is completely integrated to the unit's microprocessor control. For units with two refrigerant circuits, each circuit shall operate independently with its own modulating valve.

HUMIDIFICATION (OPTIONAL)

The disposable cartridge electric steam generator humidifier provides humidification down stream of the cooling coil. The humidifier is designed to allow all units at any voltage to produce full rated steam output at an optimum low water level.

ELECTRONIC EXPANSION VALVE (EEV) (OPTIONAL)

The refrigerant circuit(s) shall be provided with an Electronic Expansion Valve (EEV) for evaporator in lieu of standard Thermal Expansion Valve (TXV) to allow an efficient modulation control of refrigeration and consistent energy saving performances.

DB-AIRE II HUMID INTERFACE

The DB-Aire II Humid interface allows the control of humidifiers directly from the DB-Aire II microprocessor controller.

COMPRESSORIZED SYSTEMS

The refrigeration system uses highly efficient and quiet scroll compressors. The scroll compressor has a high EER, low sound power level and is highly reliable. The high efficiency is due to the controlled orbit with floating seals and advanced scroll geometry design. There is no contact of the mechanical parts in the scroll design which eliminates mechanical wear and tear. The motor is 100% cooled by suction gas. A check valve is located directly above the fixed scroll discharge port. This prevents the compressor from running backwards after the power has been switched off (i.e. no rattling and no shut-down noise). The motor is fitted with a thermostat which protects the compressor if a malfunction occurs. The refrigeration circuit includes built in compressor overload protection, filter drier, sight glass, adjustable expansion valve, low pressure override timer, manual reset high pressure control, short-cycle timer and rotalock service valves.

AIR COOLED SYSTEMS

A wide range of sizes of remote mounted air cooled condensers are available from DB-Aire II in vertical discharge.

Condensers are manufactured by DB-Aire II and include circuits sized to match the heat rejection of the corresponding compressors. The industrial duty design includes galvanised corrosion resistant housings, high efficiency aluminium finned (optional copper fins available), copper tube coils; coated fan guards, energy efficient thermally protected motors; and integral factory wired and tested control panel.

Note: 1.) Add 457mm (18 inch) to height of unit for Discharge Plenum (optional) – Upflow Models only

2.) Add 32kg (71lbs)- Model 02 to 05; 51kg(112 lbs)- Model 07 to 13; 80kg(176 lbs)- Model 14 to 26 to weight of unit for Discharge Plenum (optional)- Upflow Model only

DUAL COILS OPTION

AIR COOLED DX & CHILLED WATER SYSTEMS

This system is a combination of the both Direct Expansion (DX) and Chilled Water (CW) system with 2 cooling coil. Cooling capacity and other parameters for DX and CW System are as per stated on respective tables; except for the following.

Model	DBDD/U 02	DBDD/U 03	DBDD/U 04	DBDD/U 05	DBDD/U 07	DBDD/U 09
Fan Motor (Indoor) (kW)	1.0 (0.75)	1.0 (0.75)	1.5 (1.1)	2.0 (1.5)	2.0 (1.5)	4.0** (3.0)
Sound Pressure Level (at 2m distance, free field, downflow)	dBA	56	56	57	57	62
Weight (lbs)	kg	270 (594)	284 (625)	292 (642)	304 (669)	467 (1,027)

Model	DBDD/U 11	DBDD/U 13	DBDD/U 14	DBDD/U 16	DBDD/U 19	DBDD/U 22	DBDD/U 26
Fan Motor (Indoor) (kW)	5.5** (4.0)	5.5** (4.0)	4.0** (3.0)	7.5 (5.5)	7.5 (5.5)	10.0 (7.5)	N/A
Sound Pressure Level (at 2m distance, free field, downflow)	dBA	66	70	65	65	66	
Weight (lbs)	kg	523 (1,151)	537 (1,181)	823 (1,811)	842 (1,852)	909 (2,000)	

Notes: 1.) Add 457mm (18inch) to height of unit for Discharge Plenum (optional) – Upflow Models only

2.) Add 32kg (71 lbs)- Model 02 to 05; 51kg(112 lbs)-Model 07 to 13; 80kg(176 lbs)- Model 14 to 22 to weight of unit for Discharge Plenum (optional)- Upflow Model only

** 5Hp (3.7 kW) for unit with ETL listed

CONDENSER SELECTION

Selections are to be based on standard airflow rate and return air temperature of 24°C / 17°C (75°F / 62.5°F) or lesser at sea level.

GUIDE SPECIFICATIONS

This specification describes requirements for precision air conditioning system. The system shall be designed to maintain precisely temperature and humidity conditions for applications such as computer server rooms, telecommunication facilities, clean rooms, laboratories, etc. The precision environmental control system shall be factory assembled, DB-Aire II model vertical floor mounted by Dunham-Bush Industries, Malaysia.

R410A units shall be ETL listed for North America and Canada regions.

DESIGN REQUIREMENTS

(A) Direct Expansion (DX) System

- The unit is designed for the use of R407C / R410A .
- The system shall have a total cooling capacity of _____ MBH / _____ kW and a sensible cooling capacity of _____ MBH / _____ kW based on an entering air temperature of _____ °F / _____ °C DB and _____ °F / _____ °C WB.
- The system shall be designed based on _____ °F / _____ °C DB ambient temperature. For low ambient application, the system shall also be designed to operate at _____ °F / _____ °C DB ambient temperature.
- The unit shall be supplied with _____ / _____ / _____ (Volt/Phase/Hz) electrical service.
- The unit shall be of Upflow / Downflow configured model.

(B) Chilled Water (CW) System

- The system shall have a total cooling capacity of _____ MBH / _____ kW and a sensible cooling capacity of _____ MBH / _____ kW based on an entering air temperature of _____ °F / _____ °C DB and _____ °F / _____ °C WB.
- The system shall be supplied with chilled water with an entering water temperature of _____ °F / _____ °C and leaving water temperature _____ °F / _____ °C.
- The unit shall be supplied with _____ / _____ / _____ (Volt/Phase/Hz) electrical service.
- The unit shall be of Upflow / Downflow configured model.

(C) Dual Coils (DX + CW) System

- The unit is designed for the use of R407C / R410A .
- The system shall have a total cooling capacity of _____ MBH / _____ kW and a sensible cooling capacity of _____ MBH / _____ kW based on an entering air temperature of _____ °F / _____ °C DB and _____ °F / _____ °C WB.
- The DX system shall be designed based on _____ °F / _____ °C DB ambient temperature. For low ambient application, the system shall also be designed to operate at _____ °F / _____ °C DB ambient temperature.
- The CW system shall be supplied with chilled water with an entering water temperature of _____ °F / _____ °C and leaving water temperature _____ °F / _____ °C.
- The unit shall be supplied with _____ / _____ / _____ (Volt/Phase/Hz) electrical service.
- The unit shall be of Upflow / Downflow configured model.

(D) Direct Expansion (DX) System with hot gas reheat

- The unit is designed for the use of R407C / R410A .
- The system shall have a total cooling capacity of _____ MBH / _____ kW and a sensible cooling capacity of _____ MBH / _____ kW based on an entering air temperature of _____ °F / _____ °C DB and _____ °F / _____ °C WB.
- The system shall be designed based on _____ °F / _____ °C DB ambient temperature. For low ambient application, the system shall also be designed to operate at _____ °F / _____ °C DB ambient temperature.
- The unit shall be supplied with _____ / _____ / _____ (Volt/Phase/Hz) electrical service.
- The unit shall be of Upflow / Downflow configured model.

1 STANDARD FEATURES (ALL SYSTEMS, INDOOR UNIT)

1.1 Cabinet

The cabinet comprises an anodized aluminium frame of epoxy powder coated black color paint with nylon corners and removable steel sheet panels. All panels shall be externally installed onto the cabinet by using special stopper system without using screws. The stopper system shall also facilitate the removable of panels for additional ease of field installation, service and maintenance on the system. All panels and access doors shall be fabricated from sturdy heavy gauge of 1.0mm steel sheets with epoxy powder coated oven baked black color paint to provide a durable finish. All panels shall be of 25mm (1 inch) thick single skin and lined with minimum 80kg/m³ density thermal and acoustical closed cell Polyethylene (PE) foam insulation with fire resistant of Class O (BS 476 Part 6, 7). The system shall be designed for front access only with hinged and lock type full height doors.

1.2 Filters

The system shall be provided with 2 inches (50mm) deep (for model 02-05) or 4 inches (100mm) deep (for model 07-26) extended surface pleated disposable type filters rated for MERV 7 efficiency to ASHRAE 52.2 standard. Filters shall be withdrawable from the front of the unit.

1.3 Blower Assembly

Blowers shall be belt driven double-inlet-double-width (DIDW), statically and dynamically balanced with multiple forward curved blades mounted on a solid steel keyed shaft. Heavy-duty V-belt fan drive (sized for 200% safety factor) with cast iron pulleys keyed and secured to the blower shaft shall be provided.

1.4 Motor Assembly

Motors shall be of totally enclosed fan cooled (TEFC) with IP55 enclosure rating. Motors shall be mounted to an adjustable motor frame. Motor pulleys shall be cast iron, keyed and secured to the motor shaft.

1.5 Evaporator Air Discharge

1.5.1 Up-Flow (Front Free Return)

The system shall be configured for up-flow pattern with front free evaporator return air and top evaporator air discharge. The system shall be supplied with grilles on the cabinet doors for

GUIDE SPECIFICATIONS

front return air configuration. Up-flow systems are available with optional Discharge Plenum.

1.5.2 Down-Flow (Top Free or Ducted Return)

The system shall be configured for down-flow pattern with top free or ducted evaporator return air and bottom evaporator air discharge through the raised floor.

1.6 Electric Reheat or Hot Gas Reheat

1.6.1 For Direct Expansion (DX) System, Chilled Water (CW) System and Dual Coils (DX+CW) System only.

The electric reheat shall be factory installed low watt density finned-tubular nickel plated element heater with overheat safety controls. The electric reheat shall be of three equal stages giving a more accurate controlled response to the room requirement.

1.6.2 For Direct Expansion (DX) System with Hot Gas Reheat only

The unit shall incorporate a hot gas reheat coil located downstream of the evaporator coil with modulating valve which is completely integrated to the unit's microprocessor control. For units with two refrigerant circuits, each circuit shall operate independently with its own modulating valve.

1.7 Electrical Circuits

The system shall be provided with a factory installed electrical enclosure as per local code requirements. Control voltage of the system shall be 24Vac. The fan motor(s), compressor(s), electric heaters, humidifier (if applicable) shall have their own circuit breaker and contactor. The electrical circuit shall have provision for user to cut off control power during fire / emergency shutdown

1.8 Control System – Vision 2020i Controller

1.8.1 Controller and display

The unit shall be provided with Vision 2020i control system with the following features,

- The control algorithm and parameters shall be stored in flash memory and E²PROM of the controller and shall retain even in the event of power failures, without requiring a backup battery
- 4.3" graphical touch terminal with 65k color display
- Built in memory for data logging
- Temperature and humidity controlled
- Configurable by user
- Alarm status/display
- Analog input/output display
- Digital input/output status
- Remote start/stop input
- Digital input for customer input alarm
- General alarm output (dry contact)
- Self-diagnostics
- Security password access with multiple access level for advanced settings
- Unit status display with following information:
 - Current room temperature and temperature setpoint
 - Current room relative humidity and relative humidity setpoint
 - System ON/OFF

- Operating mode (cooling/ heating/ humidifying/ dehumidifying)

1.8.2 Alarm Monitoring

When the system is in alarm condition, the system shall activate an audible buzzer and visual alarm message on the terminal display. A digital output (dry contact) shall be closed to indicate the alarm condition. The following alarm conditions shall be monitored by the controller:

- High room temperature
- Low room temperature
- High supply air temperature
- High room humidity
- Low room humidity
- No air flow/loss of air flow
- Filter dirty
- Sensor failure
- Evaporator fan overload alarm
- Customer interlock alarm
- Unit/ Compressor running hours threshold exceeded
- LAN network disconnected alarm
- High/Low refrigerant pressure alarm (DX models)
- Chilled water flow switch alarm (chilled water models)
- Humidity Alarms
- Under floor water detector alarm (optional)
- Smoke detector alarm (optional)

1.8.3 Master-Slave Sequencing Control

When more than one unit is present in the system, master-slave or duty-standby control of this group of units shall be done by just connecting controller of each unit in serial and require no additional controller.

1.8.4 BMS communications and remote monitoring

ModBus RTU RS485 communication port shall be a standard feature of the controller. On top of that, the following options shall be available for BMS communications and remote monitoring:

- ModBus TCPIP
- BACnet TCPIP / PTP / MSTP
- LONworks
- GSM Modem
- SNMP

2 DIRECT EXPANSION (DX) SPLIT SYSTEMS WITH REMOTE OUTDOOR AIR COOLED CONDENSER (DBRC MODELS)

2.1 Scroll Compressor

Compressor shall be mounted on the base via vibration isolators. Compressor shall be charged with polyolester oil and designed for use with R410A/R407C refrigerant.

These compressors shall able to operate for outdoor ambient as high as 125°F (with bigger Condensing unit) and as low as 66°F. Lower than that, it shall be supported with the using of Low Ambient Kit.

2.2 Refrigeration Circuits

The refrigeration system shall be of the direct expansion type with one (Model 02-13) or two (Model 14-26) hermetic scroll compressors complete with ratalock connections. All refrigeration circuit shall be

GUIDE SPECIFICATIONS

pre-piped with copper tubing and include expansion valve with external equalizer, filter dryer, sight glass, refrigerant service valves, pressure fittings of manual reset high pressure control/auto reset low pressure safety cutouts and charging/access ports in each circuit.

2.3 Evaporator Coil

The evaporator coil shall be of draw through air design for uniform air distribution. The evaporator coil shall be quality construction of seamless copper tube, mechanically bonded to hydrophilic aluminium fins with galvanized coil plates. The coil shall be factory leak and pressure tested to 650psig (45 bar) for R410A system, 450psig (31 bar) for R407C system and the refrigeration system shall be sealed prior to shipment. A galvanized and painted drain pan shall be provided to cover the entire coil area. The drain pan shall be designed to incorporate sloped gutter for complete condensate removal.

2.4 Remote Outdoor Air Cooled Condenser (DBRC Models)

The remote condenser shall be constructed from sturdy heavy gauge steel sheets with epoxy powder coated oven baked, factory standard beige color to provide a durable finish.

The remote condenser shall include direct driven propeller fans, condenser coil, fan guard, thermally protected rated IP55 motors, integral factory wired and tested control panel. The condenser coil shall be quality construction of seamless copper tube, mechanically bonded to aluminium fins with galvanized coil plates. The coil shall be factory leak and pressure tested to 650psig (45 bar) for R410A system, 450psig (31 bar) for R407C system and the refrigeration system shall be sealed prior to shipment. The evaporator and condenser sections shall ship with a dry-nitrogen holding charge ready for field refrigerant charging.

3 CHILLED WATER (CW) SYSTEMS

3.1 Chilled Water Coil

The evaporator coil shall be of draw through air design for uniform air distribution. The chilled water coil shall be quality construction of seamless copper tube, mechanically bonded to hydrophilic aluminium fins with galvanized coil plates. The coil shall be factory leak and pressure tested to 450psig (31 bar) and sealed prior to shipment. Copper pipe for brazed connection shall be provided as standard. A galvanized and painted drain pan shall be provided to cover the entire coil area. The drain pan shall be designed to incorporate sloped gutter for complete condensate removal.

3.2 Chilled Water Control

The water circuit shall include 3-way forged brass valve and modulating actuators. The microprocessor positions the valve in response to room condition. Cooling capacity shall be controlled by bypassing chilled water around the coil.

4 OPTIONS

4.1 Stainless Steel Drain Pan

A stainless steel condensate drain pan shall be provided for the evaporator/chilled water coil in lieu of standard galvanized and painted drain pan.

4.2 Discharge Plenum (Up-flow Units only)

A discharge plenum box shall be provided for field installation on the top of the up-flow unit. The plenum box shall be 18 inches (457mm) high, insulated and painted to match the color of the indoor unit. The plenum box shall be fitted with double deflection grilles for room discharge of conditioned air.

4.3 Steam Generating Humidifier

Humidifier shall be factory installed inside the unit. The humidification system shall be an electrode cylinder type, complete with fill valve, drain valve, adjustable humidity output and automatic flush cycle activated on demand from the microprocessor control system.

4.4 Hot Gas Bypass (DX Systems only)

The refrigerant circuit(s) shall be provided with a hot gas bypass system for evaporator freeze-protection and capacity modulation during low load conditions.

4.5 Liquid Line Solenoid Valve (DX Systems only)

A factory fitted liquid line solenoid valve shall be provided for each refrigeration circuit as an option.

4.6 Double Skin Panels

All panels shall be provided with galvanized internal skin.

4.7 Hydrophilic or Copper Fin for Condenser Coil (DBRC)

Condenser coils shall be provided with hydrophilic or copper fins in lieu of aluminium.

4.8 Black Color Epoxy Powder Coating for Remote Condenser (DBRC)

The remoter condenser DBRC shall be epoxy powder coated oven baked black color paint in lieu of standard beige color.

4.9 Under Floor Water Detector

A remote water leak detector shall be factory provided for field installation. When water leak is detected, cooling mode of the unit is off.

4.10 Smoke Detector

A smoke detector shall be supplied loose for remote mounting. The unit shall shut down when smoke alarm is triggered.

4.11 Variable Frequency Drive (VFD) for Evaporator Blower Motor

A variable frequency drive (VFD) for blower motor shall be factory installed to vary the blower motor speed based on room's requirement.

4.12 BMS communication cards

BMS communication card shall be factory installed to enable high level interfacing with BMS system. ModBus, BACnet, LONworks, SNMP communication protocols shall be available as option.

4.13 Electronic Expansion Valve (EEV) for Evaporator Coil

The refrigerant circuit(s) shall be provided with an Electronic Expansion Valve (EEV) for evaporator in lieu of standard Thermal Expansion Valve (TXV) to allow an efficient modulation control of refrigeration and consistent energy saving performances.

4.14 Low Ambient Kit

Fan cycling for better performance during low ambient.
